

ALLSTEEL'S DRIVE TO SUPPORT SOLAR POWER... Jeff Lorenger, president of Allsteel Inc., had a chance to meet with the Iowa State University solar car team as they rolled into town with Sol Invictus, the futuristic, solar-powered car they designed. Covered in sleek solar panels, Sol Invictus visited the manufacturer's Muscatine, Iowa, headquarters during its annual educational tour. Allsteel helped sponsor the eco-friendly automotive project, providing shipping for the car's large molded pieces and donating furniture for the team's office. Sol Invictus placed 8th in last year's North American Solar Challenge, a competition to design, build and drive solar-powered cars in a cross-country, 2,400-mile-drive. The ISU entry won the race's Aesthetic Award for best looking design for the student-run non-profit Team PrISUm.
