

**Industry:**

Food

**Product:**

Terrace® 2.6 & 3.4, Acuity® work & Relate® side chairs

**Number of Workstations:**

28

**Opportunity:**

Provide workstations that maximize productivity and efficiency, yet minimize the impact on the environment.

**Color Palette:****Panel/Storage Paint:**

P4J Muslin

**Panel Fabric:**

PL 970 Propeller Oyster

**Panel Finish:**

NE 800 Natural Maple

**Worksurface Laminate:**

D Natural Maple

**Seating Upholstery:**

EMR09 Emery Timber

## Green Company Plants Allsteel in HQ

**This green company** is all about sustainability.

The organic and non-GMO food ingredient distributor does more than simply market itself as a green company. It builds eco-friendly policies into every aspect of its business. So when they needed a furniture solution for their headquarters, Allsteel, with its sustainability practices, was a natural fit.

**Reasons for Success:** Listening to and providing a solution for the client in harmony with their culture was key to a successful project, according to the Allsteel dealer team.

"The employees we spoke with were excited that we were able to carry the company philosophy about being stewards to the environment into their workspace," they said.

To bring that stewardship into an office solution, the dealer team specified Terrace 2.6 and Terrace 3.4. The panel fabric on the system is made from corn, while the steel in the frames is 25% post-consumer recycled material. The system is also flexible, meaning it can be used in multiple configurations for future changes and needs. Added with Terrace's durability and lifetime warranty, this means this company has a solution that was not only constructed responsibly, but will continue to have a minimal impact on the environment for years to come.

More sustainability was showcased in the seating. The fabrics on the Acuity and Relate chairs were made from 100% recycled content and the chairs themselves were constructed with more recycled materials that can be recycled again at the end of their usefulness.

"It's quite easy to be environmentally aware and still provide good, functional furniture solutions," the dealer team noted. "And we are able to do this without COMs or specials."

But eco-friendly doesn't have to look standard, either. The Terrace 3.4 used in the reception areas has integrated one of this company's most important resources: soybeans, which were placed in the glass tiles for a dramatic statement.

"Working with our Allsteel dealer and Allsteel has helped our company walk the walk as a green-focused organization, and at the same time provide a comfortable and workable office environment," said the company president.
